WELCOME TO 2020

We are dedicated to creating innovative products that meet the highest quality standards. As one of the world's leading manufacturers of hand-sewn balls, we have continued to innovate and expand our line of products since our founding father, Eigil Nielsen, created the first SELECT football in 1947.

We are now official match ball supplier in 12 of Europe's top football leagues, including several leagues in the United States, stating our position as the number one league partner. We are proud to now include Liga Portugal and to be represented in their 1st and 2nd league as well as the Allianz CUP.

Another major addition to our league partnerships is the Bundesliga. 2020 will be our third year for our German subsidiary DERBYSTAR as official match ball in the Bundesliga and 2nd Bundesliga – ranked as one of the best football leagues in the world by FIFA.

SELECT handballs are official match balls in a wide range of associations, leagues and clubs around the world. We are the world's largest producer of handballs and our iBall, the world's first intelligent handball, continues to add new insights into the game across Europe. We are proud to see the iBall technology included in the German Handball-Bundesliga, the French Handball Federation and premiering at the Men's EHF Euro 2020.

Our vast range of products have been updated with new Profcare elastic supports, the Eco Ice Pack and we are offering two new lines of player clothes: Monaco for match, training and leisure and Pisa for match and training.

We know that our actions matter. We are continuously taking sustainable steps in our production, packaging and business partner efforts. To name a few, we have reduced our use of plastic in our Profcare Supports saving 300.000 polybags annually, cut the plastic use in our garment packaging by 50%, and we are now using a non-woven backing layer made of recycled PET bottles in our Primera football.

We are player's choice and our ongoing mission is to develop high quality products for all players.

Welcome to our catalogue for 2020.

THE ORIGINAL 32 PANEL BALL CONSTRUCTION

Every single football, handball and futsal ball from SELECT is based on the revolution from 1962, where our founder, Eigil Nielsen, invented a ball made of 32 panels. The overriding desire was to create the most reliable ball with the most predictable, straight flight and a bounce neither too high nor too low.

It was impossible to make a perfectly round ball with just 18 panels, which was the standard construction of a ball in the past. With the 32 panels – 20 hexagons and 12 pentagons – SELECT succeeded in creating the roundest ball ever seen. Later, a group of American scientists won the Nobel Prize for discovering that the molecules of carbon with a special irradiation organize themselves as a completely round ball – something Eigil Nielsen had already discovered and realized in his football with 32 panels, why the reinvention was named “the football molecule”.

A ball with optimum roundness is essential to obtain reliable aerodynamic – a straight flight and a controlled bounce. Our finest football, BRILLANT SUPER TB, has just been thoroughly tested in a wind tunnel at the Institute of Health & Sports Science at the University in Tsukuba, Japan. The results show that BRILLANT SUPER has a better aerodynamic than other top balls in the market. The ball's classic construction with 32 panels means that the ball meets resistance at a later point in its trajectory through the air, thus retaining a steady, high speed over a longer period of time. This provides a stable and more predictable flight – highly valued by all football players.

The majority of our balls are still based on Eigil Nielsen's original invention of the 32 panel ball construction, as we never compromise on quality, playability or durability.

THE OPTIMUM ROUNDNESS

A football with optimum roundness is essential to obtain reliable aerodynamics and superior playability.

Hidden behind the elegant exterior in many of our footballs in the Pro and Club series, is a specially developed Zero-Wing bladder made of high performance natural latex.

The Zero-Wing concept ensures a perfectly round and balanced ball, always maintaining its shape through impact, resulting in a straight flight and a controlled bounce.

PERFECT FLIGHT

As SELECT footballs have a perfect and stable flight, the trajectory of the ball is easier to estimate correctly - the player's skills determine where the ball goes – not the ball's unpredictable flight.

A MASTERPIECE OF INNOVATION

BRILLANT SUPER TB has the characteristics that distinguish a classic SELECT ball and is suitable for matches at the absolute highest level. The materials are carefully selected and have exactly the qualities that give the best playability and durability.

The optimum roundness is ensured with the well known 32 panels spread over 12 pentagons and 20 hexagons. The outer material of the ball consists of synthetic leather with a light surface structure that minimizes air resistance.

Under the synthetic leather hides the SELECT natural latex Zero-Wing bladder with built-in balance point in the opposite end of the valve hole. On the outside of the bladder is a lining made of a 4 mm. thick and exclusive foam material. The outer material and the underlying foam give the ball a softer, lighter and a more comfortable touch. Despite the fact that the ball feels lighter, the weight is the same as a traditional football.

The 32 panels are thermo bonded. “TB” in the product name stands for “Thermo Bonded”, which means bonded by heat - so there are no stitches. This means the ball takes up less water and keeps the original weight better when playing on a wet surface.

The ball has, among other places, been tested at the Institute for Health & Sports Science at Tsukuba University in Japan. The test results showed that the ball – just like other balls from SELECT – faces less wind resistance in the first part of the flight, moves easier through the air and meets wind resistance later than other balls on the market.

HIDDEN BEHIND THE ELEGANT EXTERIOR

Common to all our balls is that the quality is high and the durability long. An optimally round football consists of 32 panels made up of 12 pentagons and 20 hexagons. The 32 panels are sewn together using 630 double stitches and 60 corner stitches and are closed off – especially for SELECT – with a double knot. The ball lasts longer this way.

Hidden behind the elegant exterior of the balls in our Pro and Club Series is a Zero-Wing bladder made of high-performance natural latex. The concept has been developed to ensure that not only the ball but also the bladder is as round as possible. We solely use latex bladders in our footballs with build-in balance point at the opposite side of the valve hole. This, together with the Zero-Wing concept, ensures a perfectly balanced ball with a very lively bounce.

To stabilise the ball and ensure that it remains round, the 32 panels are lined with several layers of textile material. The lining helps to adjust the softness and improves the contact between the ball and the foot.

The outer layer of the ball is made of synthetic leather in polyurethane (PU). The surface of this material can be either "shiny", "grain" or "pattern" and consists of lots of PU fibres. Combined, this gives a strong surface with consistent softness.

High quality is essential for SELECT. For this reason, each ball undergoes a stringent test at our production facilities in Pakistan. Here, they are tested for stitching, surface, roundness, circumference, weight, air retention and colour printing. Even the bladders are inflated to ensure perfect balance. Our standards for quality are the highest in the industry and the balls are of course tested and approved according to FIFA and IMS standards.

DUAL BONDED - IMPROVED STABILITY AND A SOFTER TOUCH

The special feature of the dual bonded production method is that the ball's 32 panels are both stitched together and then sealed in the edges.

A DB ball is a construction that consists of a TPU-material laminated with foam. Next, two layers of textile underlining are laminated to the foam layer to add stability. The panels are then printed with 3 mm. edge glue and stitched by hand or machine. The glue is activated in the heat mold to hide the stitches and the seam sealing is done by hand. By using glue in the sealing of the seams, the water uptake is reduced significantly.

The bladder inside is an SR bladder with excellent air retention. The result is a football with both stability, control and a softer touch compared to other footballs. Both MATCH DB and ULTRA DB balls are produced using the dual bonding method.

NO GRASS? NO PROBLEM

Designed to outperform and outlast the competition on artificial turf surfaces

Why choose SELECT TURF specific footballs?

Across the country, more and more organizations are utilizing synthetic turf surfaces that claim to deliver a “grass-like” experience. There is no denying the benefits that these types of surfaces deliver to youth and adult football players.

However, football players can testify to some of the harsh characteristics of artificial surfaces:

- Synthetic surfaces can cause a standard ball to skip and roll more quickly than it would on a grass surface.
- The rubber filling and synthetic fibers can cause a standard ball to peel and rip from regular use.

What makes SELECT TURF series different?

SELECT's commitment to innovation and quality has led to the development of the FPUG material used on SELECT turf series balls. FPUG is an extremely durable yet soft casing that improves the life of your football while ensuring natural playing characteristics.

All SELECT TURF footballs are 100% handstitched. By hand stitching, SELECT has ensured that these balls will maintain their shape and offer exceptional durability.

A photograph of four young boys playing soccer on an outdoor court. In the foreground, a boy's leg is extended, kicking a bright yellow soccer ball. The ball has the text "TAKE IT TO THE STREET" and a logo. To the left, a boy in a red shirt and grey shorts watches. In the background, another boy in a white shirt and blue pants stands near a chain-link fence. A fourth boy is partially visible on the far left. A basketball hoop is visible in the background behind the fence. The scene is brightly lit, suggesting a sunny day.

LOW BOUNCE FOR OPTIMUM CONTROL

Common to all our balls is that the quality is high and the durability long. An optimally round futsal ball consists of 32 panels made up of 12 pentagons and 20 hexagons. The 32 panels are sewn together using 630 double stitches and 60 corner stitches and are closed off – especially for SELECT – with a doubleknot. The ball lasts longer this way.

Hidden behind the elegant exterior of the futsal balls hides a specially developed butyl bladder with polyester fibers inside. That ensures a very reliable low bounce compared to a normal football making it much easier to control. All our balls have a butyl valve inside covered by foam to avoid the bladder from puncturing when inflating the ball.

To stabilise the ball and ensure it remains round, the 32 panels are lined with several layers of textile material. The lining helps to adjust the softness and improves the contact between the ball and the foot.

The outer layer of the ball is made of synthetic leather in polyurethane (PU). The surface of this material can be either "shiny", "grain" or "pattern" and consists of lots of PU fibers. Combined this gives a strong surface with consistent softness.

High quality is essential for SELECT. For this reason, each ball undergoes a stringent test at our production facilities in Pakistan. Here they are tested for stitching, surface, roundness, circumference, weight, air retention and colour printing. Even the bladders are inflated to ensure perfect balance.

Our standards for quality are the highest in the industry and exceed FIFA's regulations for the best match balls. The balls are of course tested and approved according to FIFA and IMS standards.

DUAL BONDED FOR A SOFTER TOUCH AND OPTIMUM ROUNDNESS

Futsal is a technically demanding sport that requires a special ball. We are introducing the futsal DB ball. The 32 panels are gathered with glue and stitched together - the dual bonding method. The panels are gathered by printing them with 3 mm. edge glue and then stitched. The glue in the edges is activated in a heat mold to hide and seal the stitching. This makes the ball even more round, as you cannot feel the gathering of the panels.

The ball is made from a high-quality PU material and a special foam padding that ensures an extra soft touch and faster passes.

Inside the ball is a specially developed botyl bladder filled with polyester fibers, which ensures a reduced bounce, perfect roundness and easy control.

The Futsal Speed DB ball is produced using the dual bonding method.

A CREATIVE PLAYGROUND

Futsal is an extremely intense and emotional game and therefore also exciting to watch. Besides the fast pace, more goals are scored and there are more shots on goal than in traditional football. The surface, the ball and the rules demand improvisation, creativity and fine technique from all five players on each team.

Our line of futsal balls stands out with a dynamic and contemporary design. With a classic white base colour and powerful coloured edges, the balls are perfectly visible for players, goalkeepers and spectators. The design has been created with fast player reactions in mind, and developed from valuable feedback given by professional league players, youth players and a professional goalkeeper.

Our massive range of futsal balls has a controlled bounce in accordance with the rules, and we are proud to be first-movers in the development of specific balls regulated in circumference and weight for each age group. We believe that young futsal players need balls that are smaller and lighter and are adjusted and adapted to their age. This is why we created the Futsal TALENTO range, which has been specially developed for kids and juniors.

360 DEGREES OF PERFECTION

Common to all our balls is that the quality is high and the durability long. An optimally round handball consists of 32 panels made up of 12 pentagons and 20 hexagons. The 32 panels are sewn together using 540 double stitches and 60 corner stitches and are closed off – especially for SELECT – with a double knot. The ball lasts longer this way.

Hidden behind the colourful exterior of the balls in our Pro and Club Series is a Zero-Wing bladder made of high performance natural latex. The concept has been developed to ensure that not only the ball but also the bladder is as round as possible. We solely use latex bladders in our handballs with built-in balance point at the opposite side of the valve hole. This, together with the Zero-Wing concept, ensures a perfectly balanced ball with a very lively bounce.

To stabilise the ball and to ensure it remains round, the 32 panels are lined with several layers of textile material. The lining helps to adjust the softness as well as the weight of the ball.

The most important factor regarding the softness of the ball is actually a layer of neoprene foam, which is placed between the lining and the synthetic leather. The foam maintains its softness and elasticity match after match.

The synthetic leather used in our handballs consists of an outer layer of "grippy" PU with a backside of non-woven polyester fibre. In addition to this, the special fibre threads are inlaid in a crisscross fashion to ensure the strength and stability of the material. This ensures a ball with a perfect grip, optimal balance and extreme durability.

High quality is essential for SELECT. For this reason, each ball undergoes a stringent test at our production facilities in Pakistan. Here they are tested for stitching, surface, roundness, circumference, weight, air retention and colour printing. Even the bladders are inflated to ensure perfect balance.

DUAL BONDED FOR A SOFTER TOUCH AND IMPROVED ROUNDNESS

The special feature of the dual bonded method is that the ball's 32 panels are both stitched together and then glued in the edges.

The ball is constructed with an outer PU material laminated with 2 mm. foam and then an extra inserted 3 mm. layer of foam between the surface and the inner bladder. The panels are printed with 3 mm. edge glue and stitched by hand or machine.

The glue in the edges is activated in a heat mold to hide and seal the stitching, which means that the gathering of the 32 panels cannot be felt, and the ball therefore becomes even more round.

The DB method is used in our handball, FORCE DB and COMBO DB. The bladder in this ball is a reinforced SR bladder with excellent airtightness for increased stability and controlled bounce. The overall combination of the materials and the production method gives the feeling of an incredibly soft handball with improved grip and roundness.

ULTIMATE iBall WITH A BUILT-IN CHIP THAT TRACKS AND DISTRIBUTES DATA IN REAL TIME

SELECT presents the world's first intelligent handball, Ultimate iBall, with a built-in chip that tracks and distributes data in real time. The handball premiered at the VELUX EHF FINAL4 2018. This was the first major in European sports to use the new tracking technology capturing exact ball speed, shot detection, position of the shot and more bringing fans closer to the game. Currently, the iBall is used in the German Handball-Bundesliga, the French Handball Federation and will premiere at the Men's EHF Euro 2020.

The SELECT Ultimate iBall and the associated new insights into the game will make the performance of players more tangible and result in a significant increase in fan engagement.

iBall TECHNOLOGY

Spectators are able to observe the speed of the ball and the distance from goal for every shot in the game.

The shot distribution on court from one team or a specific player will be displayed for broadcasting and digital channels.

The position of every shot entering the goal will be displayed, illustrating scoring strategies. All information is detected automatically and in real-time with interfaces for both broadcast and digital channels.

MAXI GRIP

SELECT MAXI GRIP has a unique, sticky surface without the use of resin.

This results in an excellent grip around the ball and less work in cleaning the floor; two major requirements from coaches and players in all age groups.

The surface of the MAXI GRIP handball is sticky when you catch the ball but leaves no traces of adhesives on your hand when you release it.

MAXI GRIP enables children, youngsters and arenas with a ban on resin to play with a ball that has an adhesive surface – a breakthrough in junior training and matches.

Product of the Year

MAXI GRIP

- Training ball
- A newly developed handball for youngsters with a unique sticky surface that provides excellent grip around the ball without the need of resin
- The surface is sticky when you catch the ball, but when you release it, your hand remains clean with no traces of adhesive and the ball does not leave traces on hands or sports floors. Under the surface, the ball has the well-known and highly renowned SELECT features
- The ball is made of soft and durable HPU material and when the stickiness goes, the player still has a high quality handball
- Tested by SGS and contains no harmful substances

AN ANATOMICAL WORK OF ART

With the aid of an Anatomical Fit System the gloves have been designed with a slight bend according to the natural gripping position of the hand. Thus ensuring comfort, flexibility and movement of the glove in time with the speed of the fingers.

The top model 88 PRO GRIP has an elastic insert between the index finger and thumb for optimal freedom of movement. The back of the hand consists of 3 mm deep embossed soft latex in combination with a heat injection rubber pattern making the glove softer and more flexible than before. A wide wrist strap allows a feeling of stability and safety in the wrist.

The most important thing of all is of course, the palm. 3mm NOVA Grip Latex guarantees a perfect grip in all weather conditions.

The Negative glove cut is also made of latex to provide constant latex contact between the hand and the ball. The soft inner material provides optimum comfort, increases the glove's flexibility and ensures minimal water absorption when playing in wet weather.

PERSONALIZE YOUR GLOVES

On all the gloves in our range, we have made space to print a name on the wide latex strap. Contact your local distributor for details.

Types of cuts

Negative Cut

A popular glove cut choice that reminds of Flat Cut. This style of cut also has gussets between the palm and the backhand. The gussets of the 88 glove are also made of latex giving constant latex contact between the glove and the ball. Negative Cut fits snugger and the fingers are held in place giving optimal ball contact when catching. This is the most common cut among professionals.

Hyla Cut

Features the best aspects of a roll cut and a flat cut. Latex is rolled around the individual fingertips for a snug fit and feel combined with a flat style palm that gives the fingers increased comfort and breathability. The unique combination of fit and feel allows the user to have the great fit of roll finger combined with the flexibility of flat cut.

Flat Cut

Traditional glove cut with a flat palm construction providing a larger area of contact and making the glove more flexible. This style of glove typically fits looser than many other styles with more room for the fingers. Flat Cut is the most popular cut used for finger protection gloves.

SELECT PROFCARE 

SPORTS SUPPORTS

PROTECTION WITHOUT COMPROMISE

PROFCARE Sports Supports cover every need of both elite and fitness level athletes.

The elastic range with basic supports is used for supporting minor injuries and the wide neoprene range helps to prevent injuries by having the right amount of warmth and support as well as alleviating pain caused by old injuries.

Our neoprene supports are made in a simple and functional design of superlative quality. The specially constructed shape fits instantly to the anatomy of the body, and the series comprises of products that can be used all over the body including the ankle, calf, knee, thigh, groin, elbow and shoulder. PROFCARE Neoprene Supports are used by a large number of handball players and clubs playing at top international level.

An innovative series of supports with kinesiological effect and compression has also been developed and added to this category. Several players in the world of handball already use PROFCARE Compression Supports, and a number of other professional athletes in sports like badminton, basketball, tennis and golf find advantages in our innovation.

THE FUTURE OF COMPRESSION SUPPORT

Visible, green marking on the outside for correct placement of the silicone pattern on the inside.

JUST ADD WATER

The new ECO ICE PACK is a CO₂ friendly ice pack that is lightweight, safe to handle and easy to use.

Our icepack without water has enabled us to cut down CO₂ transport emissions by 44% and save transporting 45 tons of water each year.

This sustainable step in our production and logistic setup is an important part of our growing focus on environmentally friendly efforts.

Water is easily accessible at almost any sporting event or training session. Just add water and the ECO ICE PACK is ready for use.

SELECT has world-wide exclusive rights for sports use of the ECO ICE PACK that is made of non-toxic materials that you can dispose of with household waste without harm to the environment.

BALL-PUNKTUR & BALL-STIK

Ball-Stik and Ball-Punktur was developed more than 45 years ago by relaxation therapist Grete Wolfgang. Since then, the massage balls have become iconic and used in gyms, schools and private homes.

The massage balls soften muscles, stimulate the blood circulation and create lymphatic circulation to reduce swelling.

They are produced in Denmark, and have been since 1972, with phthalate-free plastic.

“Unfortunately, modern life takes place strictly on flat surfaces. We are no longer challenged and lock up our feet in shoes with rigid soles. This causes our bodies to become lazy and forget our natural flexibility. Ball-Punktur is a great way to wake up our bodies again.”

Kristoffer Glavind Kjær, Body Therapist treating top athletes in cycling and handball and owner of ManuVision.

Ball-Punktur is small and handy and can be brought everywhere.

Treating the Tour de France riders, Kristoffer has introduced the Ball-Punktur to help riders like three-time World Champion Peter Sagan recover from a day's race by reducing muscle tension, effectively strengthening muscles and increasing blood flow to help them perform at the highest level.

The massage ball also follows the Danish national handball team, as it was a part of the 2019 IHF Men's World Championship when they took first place, and Ball-Punktur will also be present at the Men's EHF Euro 2020.

LEGENDARY SINCE 1947

SELECT Sport was founded in 1947 by Eigil Nielsen, goalkeeper for the Danish national football team, who devoted his life to create the perfect ball. The name of the company was given because of the exclusive leather that was specially selected for the ball production.

By producing many of the ball industry's groundbreaking creations such as the first laceless football, the first ball with 32 panels and balls made of synthetic leather, SELECT naturally became a trendsetter.

Back in 1951, SELECT signed a contract to supply balls for the Danish national football team, and in 1957 SELECT was appointed official supplier by the Danish Handball Federation. These partnerships have continued ever since and are some of the longest in the history of sport. A large number of agreements with both remarkable football and handball federations, clubs and players have since been made.

Today, SELECT is known as the ball specialist. Our footballs, futsal balls and handballs can be found in more than 50 countries, and we are the world's largest supplier of handballs. More than three million different SELECT balls are produced each year through a close cooperation with Anwar Khawaja Industries in Pakistan.

We have been developing balls for 70 years, and the passion for innovative craftsmanship still lives on in our daily work. Football, futsal and handball matches around the world are played with balls built on Eigil Nielsen's original principle of 32 panels, just as most balls produced worldwide are based on SELECT's inventions.

1947 Eigil Nielsen develops his first football and SELECT is born.
